Chairside

AI-NATIVE ERP · CRM · SCM FOR DENTAL CARE

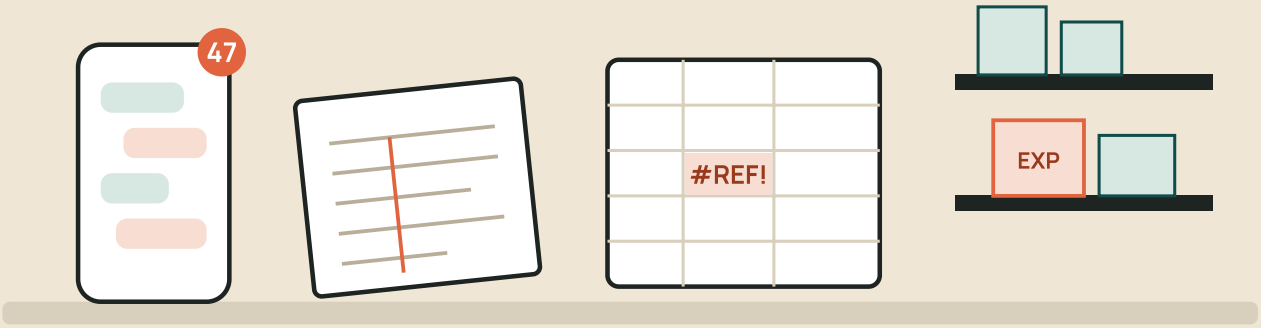

The agents run the back office.

You stay in the chair.

Chairside is the AI-native operating system for dental clinics and the supply chain behind them. Agents plan, order, check and follow up, and every action they take is limited, explained and approved where it matters.

A clinic is a small hospital, a shop and a warehouse.

Most of them are run from a phone. Appointments live in WhatsApp, stock lives in someone's memory, and the accounts live in a spreadsheet updated on Sunday night.

Three apps, one notebook and a shelf nobody has checked since Diwali.

The clinic back office today, illustrated. Every icon here is a job one of our agents now does.

01

Treatment that never finishes

A root canal is started, the crown is never fitted. Nobody chases the patient because nobody owns the list.

02

Stock that quietly expires

Anaesthetic cartridges, composites and impression material all have expiry dates. Overstock wastes money; understock cancels a surgery.

03

Finance on a WhatsApp thread

Supplier bills, GST, patient payments and lab invoices arrive on five channels and are reconciled by hand, if at all.

WHY NOW

Software that can act, not just record.

Classic ERP stores what happened. Modern AI agents can read an appointment book, plan tomorrow's stock, draft the order and check the invoice. Clinics need that help, and they also need to stay in control of it. Chairside is built on both requirements.

- Agents work from **your** appointment book, stock and price list
- Every agent action is **limited** by spend caps and allow-lists
- A human approves anything clinical or costly
- Every mistake becomes a rule the agent **cannot** break again

02 · THE PLATFORM

Eight modules. One record of every chair, box and rupee.

The full enterprise stack (sales, procurement, inventory, warehouse, production, quality, finance and HR) in the language of a dental practice.

SALES · CRM

Front Desk & CRM

Patients, appointments and treatment plans priced as a ladder of options, never a single misleading number.

FINANCE

Billing & Ledger

GST invoicing, UPI, card and EMI collection, insurance claim packs and receivables ageing in one ledger.

PROCUREMENT

Restock

Supplier catalogue, contract prices, purchase orders and document matching from order to receipt to bill.

INVENTORY · WAREHOUSE

Store & Sterilisation

Batch and expiry tracking, first-expiry-first-out picking, autoclave cycle logs and instrument kits.

PRODUCTION

Lab Orders

Crowns, bridges and aligners made by partner labs: prescription, shade, due date, remakes and cost.

QUALITY

Quality & Recall

Lot-to-patient traceability, supplier recall handling, sterilisation audits and an incident log.

HR

Team & Chairs

Rosters, chair utilisation, hygienist scheduling, leave and a payroll export your accountant can use.

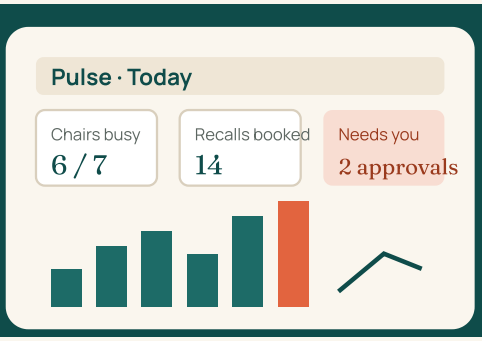

ANALYTICS

Pulse

The owner's dashboard: revenue per chair-hour, recall recovery, near-expiry stock and cash position.

One screen

for chairs, stock, cash and recalls.

Works on a tablet at the front desk and on the owner's phone.

Pulse, the owner's view. Approvals the agents are waiting on are always one tap away.

Implementation

Two-week onboarding. We migrate your patient list, price list and stock from Excel or your old software.

Training

On-site training at the chair for doctors, assistants and front desk, in Kannada, English or Hindi.

Support

WhatsApp and phone support with a 4-hour response target on working days.

Agent Tuning

A monthly review of what your agents did, what you corrected, and which new rules now apply.

Five agents. Each with a job, a limit and a human checkpoint.

An agent in Chairside reasons over your data, plans the next steps and carries them out. Every agent card states what it may do alone, where a person must approve, and what it will never do.

Recall Agent

FRONT DESK & CRM

Finds patients overdue for the next stage of treatment and drafts reminders in their language. Books them into open chair slots.

Alone	Sends reminders that use approved templates.
Human	Front desk approves new wording; the dentist approves anything clinical.
Never	Quotes one price for a treatment with a range. It always shows the full ladder.

Restock Agent

RESTOCK · STORE

Reads tomorrow's appointment book (three implant surgeries means three fixtures in the right sizes) and drafts the purchase order from the best contracted supplier.

Alone	Orders under ₹5,000 from approved suppliers.
Human	Owner approves anything above the limit with one tap.
Never	Buys from an unapproved supplier or above contract price.

Ledger Sentinel

BILLING & LEDGER

Flags unusual invoices: a bill above contract price, a duplicate invoice number, a GST mismatch, or a patient bill below the clinic's own price floor.

Alone	Holds the payment and explains why in plain words.
Human	The accountant releases or rejects it.
Never	Moves money.

Lab Liaison

LAB ORDERS (PRODUCTION)

Tracks every crown and aligner case at the lab, chases delays, and compares the delivered shade photo with the prescription before the patient arrives.

Alone	Sends status chasers to the lab.
Human	The dentist approves any remake request.
Never	Accepts a case on the patient's behalf.

Lot Tracer

QUALITY & RECALL

When a supplier recalls a batch, the Lot Tracer lists every patient treated with that lot within minutes, along with the stock still on your shelf, and drafts the clinic's response.

Alone	Quarantines the affected stock in the system so it cannot be picked.
Human	The dentist decides whether and how each patient is contacted.
Never	Contacts a patient about a recall without the dentist's sign-off.

HOW EVERY AGENT DECIDES

1 · Plan
reads the data, sets a goal

→

2 · Check
runs every rule and limit

→

3 · Act or ask
inside limits, or asks you

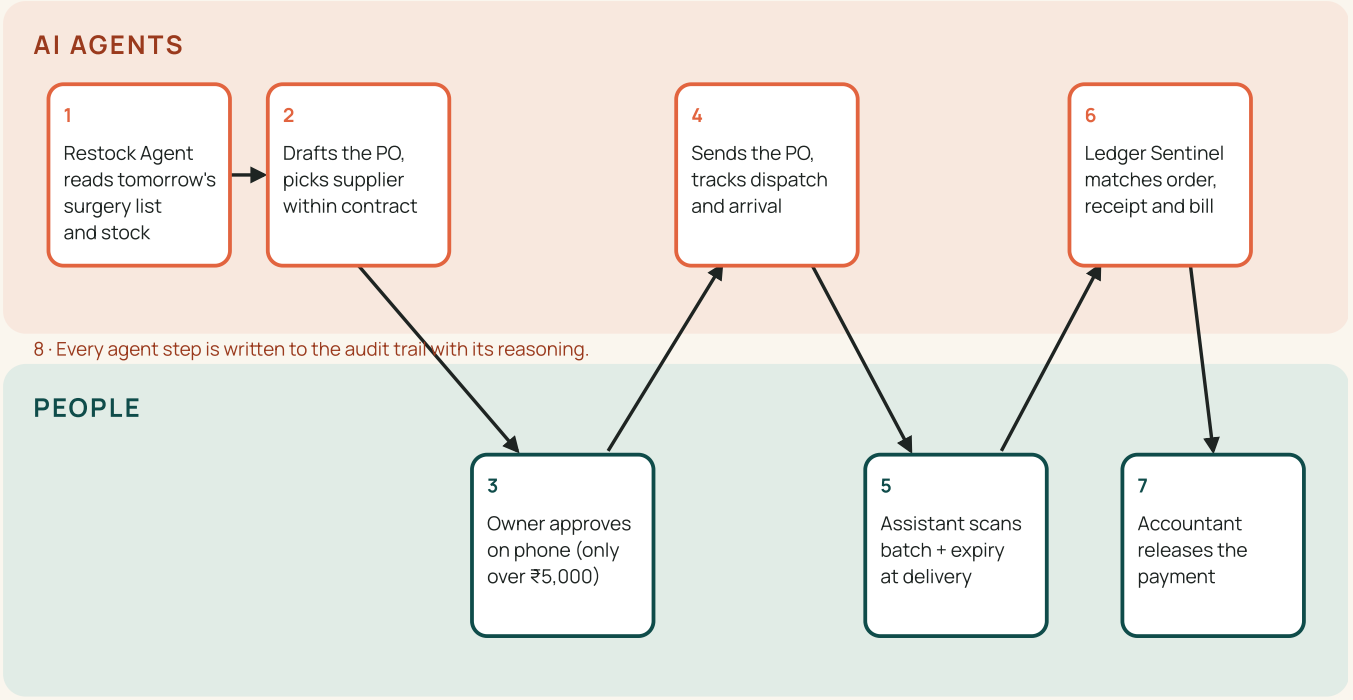

→

4 · Log
reasoning saved for aud

Procure-to-pay, the Chairside way.

Agents draft and check. People decide where it matters. Here is one complete cycle, from tomorrow's surgery list to a paid supplier.

AI AGENT STEP HUMAN STEP

Seven visible steps, three human decisions. The agent never reaches the money without a person.

4 agent steps
Planning, drafting, tracking and matching: the repetitive work that used to happen after hours.

3 human gates
Spend approval, physical receipt, payment release. Each one is a single tap with the context already attached.

0 silent actions
Every step is logged with inputs, reasoning and approver. Replay any order from start to finish.

1 source of truth
Stock, batches, orders and ledger share one record, so the agent and the accountant see the same numbers.

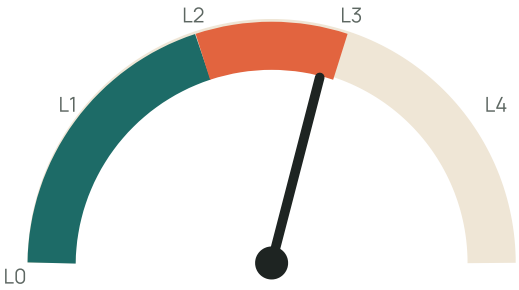

The same pattern runs order-to-cash.

The Recall Agent finds the overdue patient and books the slot. The dentist treats. Billing raises the invoice from the treatment plan. The Sentinel checks it against the price ladder before it goes out. The front desk collects the payment.

Autonomy you can audit. No mistake made twice.

Agents in a clinic touch patient data, money and medicine. Chairside controls them with limits you set, rules they cannot break, and a record of everything they do.

The Autonomy Dial

L0 Observe · L1 Suggest · L2 Draft · L3 Act with approval · L4 Act within limits. Set per agent, per clinic. New clinics start at L1, and an agent moves up only after a clean track record. One tap pauses every agent.

PRECEDENT LEDGER

Corrections become rules, not reminders.

> "Sentinel once let a duplicate glove invoice through. Sunita rejected it. From that day, a duplicate invoice number from any supplier is blocked before payment."

When a person corrects an agent, Chairside records the case and compiles it into a **blocking check** that runs before the agent acts again. It is enforced in code, not left as a note in a prompt the agent might ignore.

Policy Compiler

Upload your clinic's SOPs and price policy. Chairside turns each sentence it can into an enforced rule, and a coverage meter shows you honestly how much of the policy is actually enforced.

Sample clinic policy: 41 of 52 sentences enforced

11 need review

Hard limits, always on

Spend caps per agent · supplier allow-lists · dual approval on payments · agents never diagnose or prescribe · a full, replayable audit trail of inputs, reasoning and approver for every action.

Built for the DPDP Act, 2023

Consent, purpose limits and data-principal requests are handled in the product.

Hosted in India

Patient and business data stays in Indian data centres, encrypted in transit and at rest.

Your data stays yours

Patient identifiers are masked before any AI model sees them. Patient data never trains shared models.

Role-based access

Front desk, assistants, doctors and owners each see only what their job needs.

Clinical boundary

Clinical decisions stay with the dentist. Agents prepare, people decide.

Exit any time

Export your full patient, stock and ledger data in open formats whenever you choose.

06 · GETTING STARTED

From Excel to Chairside in two weeks.

Every plan includes guided implementation. We do the heavy lifting; your team keeps seeing patients.

Days 1–3 · Discover

We map your chairs, staff, suppliers and price list, and agree each agent's starting autonomy level.

Days 4–7 · Migrate

Patient list, open treatment plans, stock with batches and expiry, supplier contracts and opening balances.

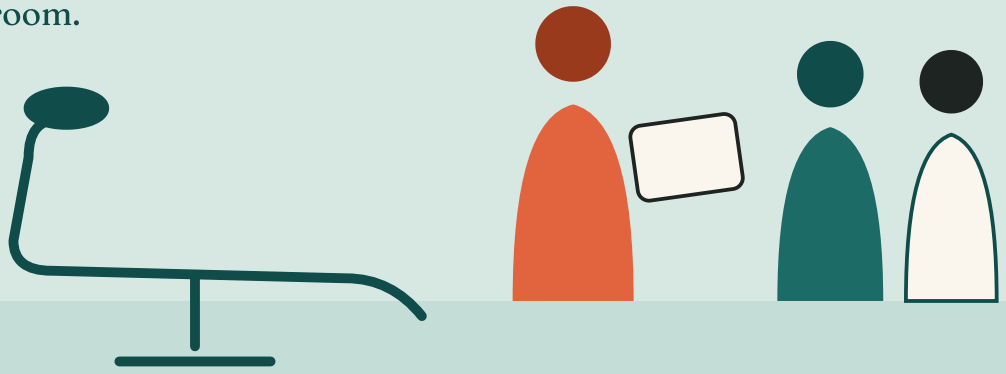

Days 8–11 · Train

Chairside sessions for the front desk, assistants and doctors, plus an owner session on approvals and Pulse.

Days 12–14 · Go live

Agents start at L1 (Suggest). We review the first week together and raise autonomy only where it has been earned.

Training happens at the chair, not in a classroom.

On-site training with the people who actually use the system, in the language they work in.

Support

WhatsApp and phone, 9 am to 8 pm, Monday to Saturday. Priority line on Group plans.

Agent Tuning

Monthly review of your Precedent Ledger: what the agents did, what you corrected, which rules were added.

Supplier Network

Your distributors connect directly, so the Restock Agent orders from live catalogues and contract prices.

PILOT PARTNER

"Clinics on the network now order off tomorrow's surgery list instead of last month's habit. We see the demand before the phone rings."

Operations team, Cusp Dental Supplies Pvt. Ltd., Bengaluru · Supplier Network pilot (fictional company, illustrative quote)

Cusp Dental

07 · PLANS & PRICING

Priced per clinic, not per click.

All prices in INR per month, billed annually, plus GST. Every plan includes implementation support and training.

Solo

1–2 chairs

₹2,499

per clinic / month

- Front Desk, Billing, Store
- Recall Agent up to L2
- Pulse dashboard
- WhatsApp support

Practice

3–8 chairs · most popular

₹6,999

per clinic / month

- All 8 modules
- All 5 agents up to L3
- Precedent Ledger
- Monthly Agent Tuning

Group

Chains with 3+ branches

₹1,199

per chair / month (min. 20)

- L4 autonomy within limits
- Policy Compiler
- Cross-branch stock and SSO
- Priority support line

Supplier Network

Distributors and labs

₹14,999

per warehouse / month

- Clinic ordering portal
- Restock Agent integration
- Batch recall broadcast
- Demand forecast feed

One-time implementation: ₹25,000 for Solo and Practice; quoted for Group and Supplier Network. Free 30-day pilot for clinics in Bengaluru.
